

Bird Screen

Bird window-kill prevention screen

Suction Cup Tips

The suction cups provided with the Bird Screen are quality, US-made products. They should last the life of the Bird Screen. However, certain conditions can affect their holding power.

When applying the suction cups to your window, be sure the area where the suction cup will be fastened is clean and free of dirt, dust, and detergents. If you clean the window just before mounting the Bird Screen, let the window dry for an hour or so to be sure all chemicals from the cleaning fluid have evaporated.

Rub your thumb or finger over the glass side of the suction cup to apply a little “finger grease.”

These steps should result in the suction cup holding in place permanently, barring physical removal.

If a suction cup pops off during cold weather, place it in a bowl of hot water to restore its flexibility before remounting it.
